

You construct your door in the Klaes-construction as usual and from there you start directly into the door panel configurator of your manufacturer. Now, you simply choose the required panel and the accessory, if necessary. Then you can design it according to your favourite colours and glasses. Your panel can be calculated automatically according to the allocated conditions and get transferred to the Klaes Construction-Program with text and price. Ready!

AND THIS IS HOW YOU DELIGHT YOUR CUSTOMERS

CONFIGURE PANELS

Simply configure your door panels of the Klaes-construction and switch to the panel configurator of the manufacturer with just one click.

CALCULATE AUTOMATICALLY

All prices can be calculated automatically and the order data can be recorded. Then the description and the prices referring to the selected panel will be transferred to your Klaes Construction-Program.

DISPLAY PERFECTLY

Your selected panel is displayed perfectly on your commercial documents and in the construction. The panel sketch is generated by the configurator.
